

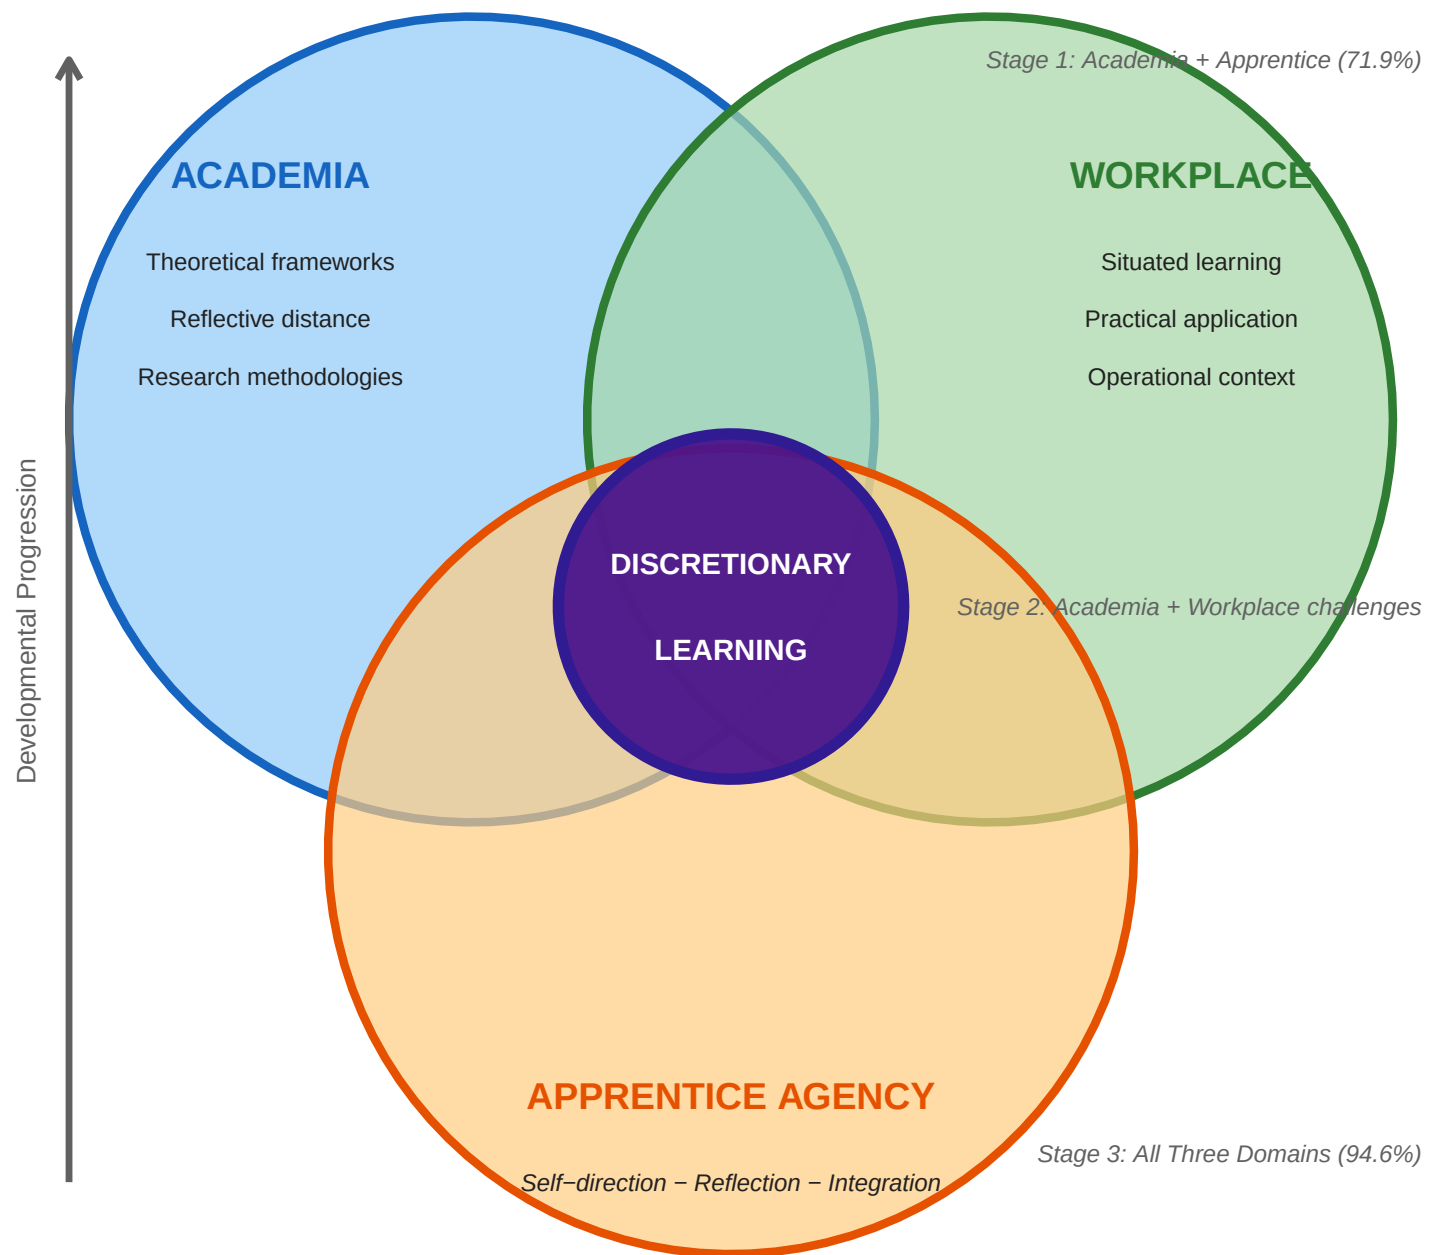

Figure 1. Developmental Tri-Sphere Model of Discretionary Learning. The model illustrates three interconnected spheres: Academia (theoretical frameworks, reflective distance), Workplace (situated learning, practical application), and Apprentice Agency (self-direction, knowledge conversion). Developmental progression moves from Stage 1 (Academia + Apprentice optimal, 71.9%) through Stage 2 (Workplace integration challenges) to Stage 3 (All Three Domains mastery, 94.6%), with Discretionary Learning emerging at the central intersection.
